

Five Things About Butterflies

 Butterflies can be found fluttering around every continent except Antarctica.

 The insects feed on nectar and pollen from flowers.

 They taste with their feet—that's where their taste receptors are located.

 A butterfly's two eyes have 6,000 lenses each.

 Their wings are actually transparent and covered with thousands of tiny scales. Light reflecting off the scales creates the colors and patterns we see.

“THE EARTH IS WHAT WE ALL HAVE IN COMMON”

-WENDELL BERRY

DID YOU KNOW?

AN AVERAGE SIZE TREE WILL PRODUCE ENOUGH OXYGEN TO KEEP FOUR PEOPLE BREATHING FOR A YEAR.

SAVE THE TREES

I want to share a story told to me by the past resident pictured above. Barbara enjoyed wearing jewelry, this wasn't a new obsession, Barbara said she loved jewelry as long as she could remember. In fact, when she was about five years old, she took her mother's beautiful ruby ring from her jewelry box and buried in the back yard. I ask Barbara, "Why did you bury it"? she said because she wanted to sprout a ruby ring of her own!! Barbara told me they always had a garden and she watched things sprout out of the ground all the time, she was sure that her mother's ruby ring would sprout and Barbara would have a ruby ring all of her own. Needless to say, Barbara's mother did notice her ruby was missing! Eventually, Barbara's secret planting adventure was told to her mother. The buried ring was found and many, many years later Barbara bought herself a ruby ring of her own!

I have been nostalgic lately, and have really enjoyed thinking of all the past residents that have come through the doors of Carrington Court and gone on to a higher calling. This small remembrance is a nod to all of them.

Happy Birthday!
